

Our kitchen will be the most energy efficient kitchen in KISD because we will:

1. Turn off lights in cafeterias, freezers, coolers, storerooms and restrooms when these areas are not in use
2. Use serving lines only when needed (shut down between breakfast and lunch?)
3. Turn off ovens, steamers, warmers, etc. when they are not being used or needed
4. Unplug appliances (especially during holidays and breaks)
5. Set faucets to right level and turn off when not in use
6. Turn on and use only ovens/steamers/other equipment as needed (for example 1 oven instead of 2)
7. Minimize time that cooler/freezer doors are open (for example pull needed items in groups)
8. Report maintenance concerns (for example: seals on cooler systems, improper space temperatures, aging equipment, HW temperatures, etc.)
